SUMMARY

Data Analyst with 12 months of hands-on experience across two virtual internships and 15+ analytics projects covering e-commerce, retail, banking, sports and restaurant data. Skilled in SQL, Python, Power BI, Tableau and Excel for data validation, KPI dashboards and root-cause analysis. I turn business questions into clear findings and prioritized recommendations for stakeholders.

SKILLS

SQL: MySQL, Query Writing, Joins, Subqueries, Aggregations, Window Functions (DENSE_RANK), Stored Procedures, Views, KPI Queries

Python: Pandas, NumPy, Matplotlib, Seaborn, Jupyter Notebook, EDA, Data Wrangling, Feature Engineering

Power BI / Tableau: DAX, Power Query, Data Modeling, Star Schema, Dashboard Design, KPI Reporting, Parameters

Excel: Power Query, Pivot Tables, Pivot Charts, Data Cleaning, Dashboards

Data Preparation & Analytics: Data Cleaning, Data Validation, Data Quality Checks, ETL, KPI Analysis, Trend Analysis, YoY Growth, Root-Cause Analysis, Customer Segmentation, Statistical Analysis (Correlation, Standard Deviation), Ad Hoc Analysis, Insight Generation, Business Metrics (Margin, AOV, ROI, Return Rate), Data Visualization, Business Intelligence, Data Storytelling

EXPERIENCE

Data Analytics Virtual Intern, InsightNest | GitHub — May 2026 – Aug 2026

Worked with the Analytics & Career Excellence team on 3 Power BI projects and 1 business case study, including E-commerce Analytics, NovaKart Analytics, Global Movie Success and the Marlow & Finch case study. Cleaned data, answered stakeholder questions and wrote recommendations, learning to frame each analysis around a business question.

- **E-commerce Analytics:** Built a 6-section Power BI dashboard on 1,000 orders and 326 customers, covering KPIs, revenue and profit, customers, returns, and marketing and seasonality, with filters for segment, category and country (findings under Projects).
- **NovaKart Analytics:** Investigated 39 business questions on revenue, sales trends, delivery, returns and customer behavior in Power BI (Power Query, DAX) and closed with one quantified recommendation.
- **Global Movie Success (team project):** Owned the 5-page Power BI dashboard and the DAX measures on a 100,000-movie dataset, while a teammate handled the Python cleaning and analysis. Sci-Fi, Fantasy and Adventure led revenue; budget and audience score moved with revenue but did not guarantee it. The profit margin was 46.56% and the average ROI was 176.87%.

Data Analyst Virtual Intern, AI Variant (ExcelR program) | GitHub — Jul 2025 – Apr 2026

Completed a virtual internship through ExcelR's Data Analyst program. Cleaned data in SQL and Excel, wrote SQL queries for KPIs and built Power BI and Tableau dashboards, learning the full workflow from raw data to reporting.

- Completed 3 projects: Adventure Works sales ($29.4M, 50,000+ rows), Atliq Hospitality (₹1.71bn revenue, 135K bookings) and HR Attrition (50,000 employees, 50.21% attrition rate).
- Wrote 15+ SQL queries (joins, aggregations, stored procedures and KPI views) and built Power BI and Tableau dashboards tracking 6 KPIs: sales, gross margin, customer count, regional performance, returns and order volume.
- Identified 2012 as the peak revenue year and Q4 as the strongest quarter, to guide inventory and campaign planning.

PROJECTS

E-commerce Analytics Dashboard — Power BI, Excel

- Electronics brought in 53% of revenue but only 31% of profit, Fashion had the highest margin, and discounts above 20% caused losses.
- The 8.2% return rate cost 18.37K in revenue, with Fashion returns at 14.16%. Repeat buyers made up 84% of customers and 95% of revenue, and December was the peak month, so inventory should be planned before Q4.
- Organic Search was the top marketing channel (63K revenue, 18K profit) and Affiliate the weakest (23K revenue). Weekdays earned twice the revenue of weekends, which can guide campaign timing.

Marlow & Finch: Sales & Margin Diagnostic (Business Case Study, InsightNest) — Business Case Study

- Practice engagement on a fictional retailer whose gross margin fell from 52.4% to 44.9%. No dataset: the task was to understand the business and the data first.
- Wrote an initial-understanding document and a questionnaire of the questions to ask and the data needed.

Zomato Sales & Rating Analysis — SQL, Tableau

- Compared 9,551 outlets in 15 countries and 141 cities (1.50M votes) using 15+ SQL queries, stored procedures and window functions, and built a 3-page Tableau dashboard with 5 KPI cards, parameter-driven filters.
- Outlets with online delivery and table booking averaged a 3.5 rating against 2.8 for those without. This shows association, not causation.

IPL Analysis (2008–2025) — Python, Pandas, Matplotlib, Seaborn

- Cleaned and merged 4 datasets (278K ball-by-ball records across 1,169 matches) in Pandas, with duplicate and null checks, date parsing, data type fixes and feature engineering.
- Explored 18 seasons with 25+ charts. Sixes per season rose from 623 to 1,302 and the average run rate from 7.98 to 9.20, with overs 17–18 as the highest-scoring phase.

Amravati AQI Analysis 2024 — Python, Excel, Power BI

- Collected 366 days of AQI data from India's CPCB website, cleaned it in Python and built a 3-page Power BI dashboard (average AQI 85.86; Q3 monsoon cleanest at 38.95).

EDUCATION

B.E. Electronics & Telecommunication, Prof. Ram Meghe Institute of Technology and Research — 2021 – 2025 | CGPA 7.64

HSC, S.F.L High School and Junior College — 2019 – 2021 | 85.67%

CERTIFICATIONS

Data Analyst, ExcelR | Certificate Program in Data Analytics, NASSCOM | Data Analytics Job Simulation, Deloitte (Forage)
